

Figure 1 — Unrecognized kidney and heart damage across the type 2 diabetes spectrum

AI-READI v3.0.0, N = 2,280. Unrecognized = abnormal study-visit result with no corresponding self-reported diagnosis. Bars and bands: Wilson 95% CI. Burden rises with severity while the conditional fraction falls — sicker groups carry more damage, so even a smaller share missed is more people. Nerve carries no unrecognized figure: v3.0.0 has no neuropathy self-report item.
