

Figure 2 — Multi-organ damage: how many organs, and which together

AI-READI v3.0.0; participants measured on all three organs (n = 2,216). Abnormal = ACR ≥ 30 mg/g, hs-cTnT ≥ 14 ng/L, ≥ 2 insensate sites of 10. This figure shows measured damage only; recognition is shown in Figure 1 for kidney and heart, and cannot be assessed for nerve.
